

≡Articles, Articles, Articles≋

EBSCO: It's not just for ATLA

You can search any or all of the EBSCO databases simultaneously. Just click Choose Databases, and select which databases you want to search.

****Limits and Scripture searching do not apply to all databases****

Recommended Databases are:

Academic Search Complete
Catholic Periodical and Literature Index
Index to Jewish Periodicals
New Testament Abstracts
Old Testament Abstracts

Discover SMU Resources

Discover SMU Libraries and the *Library Catalog* both let you filter and limit your search to electronic materials. E-books and digitalized works are searchable in the catalog, with links to the electronic version available in the catalog record.

Classical Texts, Modern Access

The *Digital Library of Classic Protestant Texts* and the *Digital Library of the Catholic Reformation* are great resources for the study of the religious and social upheavals of the 16th and 17th centuries. These databases provide web-based access to a range of seminal works from the Reformation and post-Reformation eras, including theological writings, biblical commentaries, confessional documents, treatises, decrees, catechisms and inquisitorial manuals, liturgical writing, and devotional works by more than 300 different Catholic and Protestant authors.

Past Masters is a series of searchable full-text databases, containing the works of Anselm, Aquinas, Aristotle, Augustine, Calvin, Francis of Assisi, Luther, Plato, and Latin Masters from 1100 to 1550. You can search the works of an individual author or multiple authors simultaneously. The works are available in Latin or in English.

Full-Text Fun for Everyone

Project Muse offers full text access to current content from prestigious humanities and social sciences journals.

JStor is an archive of full-text scholarly journals, viewable as they were originally designed, printed, and illustrated. These journals span many disciplines, including Archaeology, Art History, Classical Studies, History, Philosophy, and Religion.

Google can be Scholarly, Too

Google Scholar allows you to search articles through Google's familiar search interface. Links to JStor and other SMU databases quickly connect you to materials.

Google Scholar also locates citations listed in various published works, and allows you to search for electronic or print copies of the item.

****Connections to SMU only function when you are on the SMU network****

Google Scholar can help you locate obscure articles, some of which are offered for a fee.

NEVER PAY FOR AN ARTICLE UNTIL YOU TALK TO A LIBRARIAN

You probably already have access to the material; the librarians can help you find it!
