

# ANTH 2363 THE SCIENCE OF OUR PAST: AN INTRODUCTION TO ARCHAEOLOGY

TTh 11:00am—12:20pm  
Dallas Hall 306

This course is a general introduction to contemporary archaeology, the scientific methods through which we recover the past and how these differ from the portrayal of archaeology and archaeologists in the popular media. The goal of the course is to provide students with the background to make informed decisions about the preservation, destruction, and exploitation of heritage sites and to think critically about presentations of the past in newspapers, magazines, the Internet, and other media.
