Welcome to Dedman College!

Welcome to SMU and the Dedman College of Humanities and Sciences! Dedman College encourages curiosity and challenges conventional thinking. As the oldest, largest and most diverse school on campus, we are the heart of SMU. We are also home to the humanities, social, natural, and mathematical sciences.

Dedman is home to 16 different departments and over 90 majors and minors. Nearly half of all declared majors and minors are found in Dedman College.

Dedman College Ambassadors (DCA) is a student organization devoted to creating a cohesive and unified Dedman College community. DCA works towards establishing and maintaining a sense of “Dedman pride” on and off campus while encouraging students to pursue a major or minor within the College.

This newsletter contains the stories, passions, musings and advice of Dedman College students hoping to pass on the wisdom of their experience to future SMU students.

- Pony Up!

The Ded-Beat is the official newsletter of the DCA. The views represented within are not necessarily those of Dedman College nor of Southern Methodist University. All inquiries regarding The Ded-Beat or any of its content may be directed to Dami Salako, President of DCA and Editor-in-Chief of The Ded-Beat, at dsalako@smu.edu.

A Guide to First-Year Science Professors

by Kristina Lackey

Are you interested in the pre-health track, pursuing a science degree, or simply taking classes in the “Sciences”? If so, you will probably enroll in Introductory Biology and Introductory Chemistry during your first few years here. In which case, here is a quick snapshot of some of the professors here who teach those courses.

The Introductory Biology (first semester) professor, [Dr. Wise](#), is a great professor who is passionate about the subject he teaches. He will amaze you with his vast, yet specific knowledge about the study of life. Dr. Wise urges his students to read the textbook before attending lecture, which is a great way to approach any college course and ensure that you know the basics before you come to class. He is a very welcoming person and will help you understand any concept, as long as you put forth the effort to learn.

[Dr. Oberdoster](#) is the Introductory Biology (second semester) professor, who is guaranteed to make any lecture more entertaining with her numerous anecdotes about her toxicology and aquatic biology courses. She is true to her word when she says that she only tests you on material that she has gone over in her lectures. I highly recommend that you

attend every lecture for this course because it covers information that isn't in the textbook. Unless you absolutely have to, don't miss a class!

“Here at SMU, you are getting the highest quality professors that a college can offer.”

General Chemistry (semesters 1& 2) may seem like an intimidating subject, but [Dr. Wisian - Neilson](#) will make sure you know the material backwards, forwards, and sideways and that you are prepared for any and all future courses like Organic Chemistry. She is very involved in research and truly loves the course she teaches. Dr. Wisian - Neilson loves to use visuals in class and does an excellent job approaching problems, using different methods so that everyone will understand the material. She offers so much of her time to help students succeed, including office hours and online help sessions before each exam. With the online help sessions, you don't even have to leave the comfort of your own room!

Here at SMU, you are getting the highest quality professors that a college can offer. All of

the professors have a doctorate and are currently researching at SMU, acting as pioneers in their field and uncovering the mysteries of the biological and chemical sciences. In addition to being trailblazers in their field, these professors share their knowledge with students so that we may have the opportunity to follow in their footsteps and make further advances in science.

Kristina Lackey is a sophomore, majoring in Biology and Chemistry. She can be reached at klackey@smu.edu.

COURSE SPOTLIGHT:

CLAS 2311: Myth and Thought in the Ancient World.

Explores the conceptual and philosophical underpinnings of ancient understandings of reality in Western and non-Western cultures in ancient and modern times. Materials for investigation will be primarily textual, including myths, epics, tragedies and philosophical discourse in ancient Greece.

Egyptian, Roman Culture Live in Spring Class

by *Adrienne Glaze*

If you are a classical studies major or love anything about ancient Egypt, Cleopatra, or the Roman Empire, the seminar *The Triumph of Cleopatra: Egypt and Rome Under the Empire* is a great class to consider. In this research class, students choose their own topic for a twenty-five page research paper.

The class focuses on the interaction of cultures in the Roman Empire as it spread across Europe and Asia. Ancient Egypt is used to describe and understand Rome because, as Dr. Dowling explains, "Rome is transformed by the Egyptian culture." Romans were religious and cultural tourists in Egypt, and Cleopatra is the link between the two ancient civilizations. Students read about the many different ways she was represented, from Roman propaganda slandering Cleopatra as an evil queen to ancient Egyptian archaeological articles describing her as a good queen. Once students begin writing their research paper, they start to enjoy as well as appreciate their work because, through their research and analysis, they are contributing to history. And, let's face it, many of us want to be remembered in some way. Here is your chance to leave your mark on history, or at least get your foot in the front door.

Adrienne Glaze is a senior. She is majoring in English and History with a minor in Medieval Studies and can be reached at aglaze@smu.edu.

10 Things to Know About College

by *Sara Shaffer*

- 1.** Bring snacks and stock up! You will get hungry late at night when Umphrey Lee (the campus cafeteria) is closed and you won't want to trek all the way to Mac's Place to get food - especially if you live in the North Quad.
- 2.** Get plenty of sleep, and bring a mattress pad or topper. Beds in college are not incredibly comfy and you will need the extra padding to get a good night's sleep.
- 3.** Bring an umbrella, a rain jacket and rain boots. It rains in Texas, too!
- 4.** Studying in college is completely different from studying in high school. There will be fewer exams and they will cover more material than you are probably used to. Take thorough notes during lectures.
- 5.** Planners, lists and calendars are extremely helpful for staying organized. It is much easier to manage your time if you have everything written down. Take advantage of these tools!
- 6.** Don't do your laundry on the weekends. There won't be any washers or dryers available because that is when everyone is trying to do their laundry for the upcoming week. Try snagging the washers and dryers during the weekdays, especially in the afternoons.
- 7.** Comfy clothes are a must. Especially when you don't feel like exerting a lot of effort before an early morning class. SMU students are notorious for dressing well, but we all have our lazy days!
- 8.** Even though you might feel overwhelmed by doing it, check your SMU email often. Going to class when your professor cancelled via email is awkward and annoying.
- 9.** Join different clubs and organizations and go to their meetings to decide which ones you like best.
- 10.** Don't worry if you don't meet your new best friend at Mustang Corral (the new student, 3-day, off-campus retreat before classes). It's not uncommon and you still have the rest of the year!

Sara Shaffer is a freshman. Her majors are English and Art History. She can be reached at sshaffer@smu.edu.

The Hilltop Scholars Program

by *Aubrey Richardson*

The Hilltop Scholars Program (HSP) is comprised of students who have indicated high academic ability and leadership skills in their application to SMU. Students who are chosen have the opportunity to interact closely with students of similar academic and leadership backgrounds, both inside and outside the classroom. It is for first-year students only and is a wonderful program to be a part of.

“HSP provides an amazing opportunity to grow as an individual and as a student.”

It is different from other programs because it is a residential community. Living in close quarters with the same people you take classes with is a true blessing and convenience. There is always a friendly face on your way to class and always a helping hand at the end of the day. Doors are always open and students are able to engage with each other on both a social and academic level. Socially, the students of HSP are a close-knit group of friends that bond as a floor, hall, and program.

Another major advantage of the program is the residential classrooms. Taking classes in the same hall as your dorm room creates a sense of pride within the community and

encourages a close-knit group. Similarly, the specialized Hilltop classes give students the chance to explore a new discipline with top notch professors.

I took *Debunking Myths in Archaeology* my freshman year and it was, by far, my favorite class of the year. There were only twelve students in the class and we all sat around a desk the size of a dinner table, which made for an intimate classroom setting. The professor had also just finished archaeological dig in Peru and was able to describe the dig in relation to our class, which made the material even more intriguing.

Deciding to join the Hilltop Scholars Program was the best decision I could have made for myself freshman year. The program gave me a solid academic foundation, as well

as a friend base to put me in the best position for success. College is a chance to try new things and to take advantage of every opportunity offered to you. Do not let this opportunity pass you by.

Aubrey Richardson is a sophomore majoring in Sociology and History. She can be reached at arichardson@smu.edu.

COURSE SPOTLIGHT:

GEOL 1305: Oceanography

A study of the physical (geological), biological and chemical processes responsible for the existence of the ocean as we know it today. Examines the impact of man on the oceans and oceanography's role in resource development, climatic and environmental modification and other human concerns. The class consists of 3 hours of lecture and 2 hours of labs each week.

Pre-Law in Dedman College

by *Lisa Martinez*

One key question that students always ask when contemplating law school is, “What they should I major in?”

Students typically think that there is a “best choice” when narrowing their options. As a student who is currently undergoing the pressures of preparing for law school, this is understandable. However, after speaking with current law students and college advisors, I’ve found that most avoid a definitive answer. It is not about the specific major you choose, but the opportunities you take

advantage of and excel in.

Dedman College offers an array of courses that will foster the practice and growth of written and oral expression. Law school will require you to not only display an understanding of the concepts, but also to verbally report them with confidence and clarity. Dedman College also provides classes that allow students to explore problem solving from a logical perspective, challenging orthodox thinking. As reported by SMU, 60 percent of the pre-law seniors stem from Dedman College. This is most

likely due to the range of majors the school offers and the priceless opportunities they present.

The pre-law student has many options to partake in at SMU. Dedman College has a boundless selection of avenues that give potential law students an edge through exposure to knowledgeable and seasoned professors and invaluable experiences.

Lisa Martinez is a junior majoring in Human Rights and Psychology. She can be reached at Immartinez@smu.edu.

Major: Undecided

by *Dami Salako*

If this is your current major, don’t panic! College is the perfect time to explore options and delve into topics or concepts that interest you. Always wanted to take a European History class? Maybe Psychology? Medieval Studies? Latin? Philosophy? Now is the time to take those classes and discover just how interested you really are. Nearly all SMU students change, drop or add majors/minors during their four years here. Starting off as “Undecided” is nothing to be afraid of. Use your first few semesters to explore classes that interest you and go from there.

Dami Salako is a junior. She is majoring in Biology and English/Creative Writing. She can be reached at dsalako@smu.edu.

For SMU's Future Fashionistas: The 10 Must Do's to be an SMU All-Star

by Zoya Mohammad

Known for its dapper students, SMU is reminiscent of the runway. You may walk around any other college and find hundreds of students wearing their pajama bottoms to class, but here at SMU, we keep it classy (of course, excluding finals week). The implications this has on the impression you give professors, officials of SMU and your peers is great - believe it or not. A fashionably put together student here at SMU is one that expresses an eagerness to learn, seriousness in their career and professionalism. Of course, we aren't implying conformity, but instead, a general guideline (let's say "code") of expectations that you can alter to be your own. For those of you who are not familiar with or need a little help understanding how the typical SMU student gets from the bed to the classroom, here are a few pointers:

1. Brush your hair. No, really.

Of course, you might use your 8am as an excuse to roll out of bed ten minutes before class, not bothering with the mane atop your head. But really, this is the least you can do for your peers, your professors and, well, yourself. Not only does it show that you care (considering the minimal amount of effort), but it makes you look like a more professional student. Even if "brushing your hair" really means running your fingers through it. It will make a difference.

2. The Button-Up.

Button-up shirts are a staple here at SMU, and are actually an easy way to trick everyone into thinking you put a lot of effort into your outfit. All you have to do is put it on, throw on a pair of jeans, khakis or a skirt, and you are set. An awesome trick is to hang your button-ups with two or three buttons undone at the top. Now, you can just throw it on like a regular t-shirt. Just be sure to button those undone buttons on your way out the door!

3. Have a pair of khakis.

Bet you didn't see this one coming. Guys, this one is especially for you. They can be worn as semi-formal attire with a blazer. Or, you can pair it with a collared polo and voilá - you've got a more casual look.

4. Sunglasses.

This isn't really for making an impression, but your eyes will thank you for this one. For you out-of-state'ers: welcome to Texas! An afternoon walk to your English class in Dallas Hall might cause you to encounter some heavy-duty sunlight piercing into your pupils. And what better way to fix the problem than with a stylish pair of Wayfarers accessorizing that beautiful face?

5. Pro-tip for the Lovely Ladies of SMU.

Ladies, let's face it: a good majority of us appreciate a nice dress or skirt. So, why not wear one to class? On, yeah. Just be sure your definition of nice encompasses a skirt/dress that is a mere bit longer than your rear side. Add some easy-to-

wear heels or some cute flats, and you're ready to go!

6. Pro-tip for the Handsome Gentleman.

As previously stated, khakis should be your staple (in shorts or pants form). Get a belt, some matching dress shoes or Sperry's and an array of shirts to wear with them. You don't need a crazy elaborate closet, but when you do decide to go shopping (or have your Mom shop for you), make sure the few items you buy are professional and sophisticated. If you plan on buying less, go with solid colors. It will make your outfit look almost-new, every time. Think about it: it's easier for others to remember that red and blue plaid shirt you wore two days ago versus that solid blue one you wore yesterday.

7. Wash your face.

I hope this goes without saying, just as brushing your teeth and taking regular showers should. Really though, wash your face. Keeping your face clean will prevent the dreaded acne that can be so distracting. It will also prevent that awful, shiny sheen on your face that is especially visible in Instagram photos.

8. Mind your gait.

Walk confidently. The sidewalks of SMU are your runway.

9. Shoes, shoes, shoes.

Keep your shoes clean and prevent wear and tear. If you can't always buy new shoes, then don't! Just make sure the pairs you do get are nice, neutral colors and are taken care of. Don't let old mud dry on them, and don't let those laces fray. If they are dress shoes, get them polished every now and then. If they are pretty beat...well, we'll call them your "lazy day" pair.

10. Know how to redesign your outfit.

While having the opportunity to buy new clothes is always fun, it's definitely not necessary or cost-friendly. Having a good eye is simply the key. If you are wearing the same outfit, change your hairstyle and it will make a big difference! This option is a tad easier for girls. Also, dare I say it? Pinterest may grant you inspiration. For guys, try the combed over gentleman's look one day, and a clean-cut rugged look another. Also, try mixing and matching different pieces. And, of course, accessorize!

Ladies, just by changing a necklace, you're changing the outfit. Gentlemen, maybe add a scarf in the winter? Get creative.

**Now get out there and
WORK IT.**
