WORKING PAPERS

Environmental Matching Commitments

The Jurisdictional Anticommons

RESEARCH GRANTS & AWARDS

Alliance for Market Solutions

Supports student researcher and two international workshops to research the use of carbon matching commitments to address two key climate policy challenges: 1) how to harness national climate regulation to encourage international action and 2) how to ensure that nations can take a leadership role in addressing emissions without harming their own industry's competitiveness or damaging international trade. Will result in law review article and a policy brief.

SMU Mission Foods Texas-Mexico Center

Supports student researcher and two international workshops to set an agenda for legal reform to realize the full potential of Texas-Mexico energy trade. It will propose legal reforms in Texas, the United States, and Mexico that will enable mutually-beneficial trade. And it will lay out the structure of possible new energy agreements that could be adopted by Texas, Mexico, or the North American Free Trade Agreement partners to reap the full benefit of cross-border energy trade. Will result in law review article and a policy brief.

Stikeman Elliott LLP Corporate Law Research Fellowship (Completed)

Supported student researcher to assist in empirical analysis of how corporations describe the impact of proposed regulations in their submissions to regulators and shareholders, and how they tailor their predictions to the different audiences. Resulted in publications in HARVARD ENVIRONMENTAL LAW REVIEW and ENVIRONMENTAL LAW & POLICY ANNUAL REVIEW.

Vice-President Matching Funds to Advance Energy Research (Completed)

Part of the University of Calgary's interdisciplinary Hydraulic Fracturing Innovation Initiative. Supported post-doctoral fellow to assist in life cycle analysis of natural gas production and export, which accounts for all greenhouse gases that are emitted and avoided as a result of natural gas production and use. To aid regulators, the life cycle analysis is calibrated for alternate theories of regulatory jurisdiction and for the different types of power production (e.g. coal, oil, nuclear) that natural gas may displace. Resulted in publications in ENVIRONMENTAL SCIENCE & TECHNOLOGY, C.D. HOWE INSTITUTE, and CANADIAN INSTITUTE OF RESOURCES LAW.
